

21. How about if Organization in Position is too long?

Core Change Announcement: Log#059205(3098) – Bug fix for problem on creating Work Structure > Position

Request Date: 20-Oct-2005

Problem Description: If the name of Organization was too long, i.e. more than 60 characters, Position for this Organization could not be created. It was because the field length limit of the 2nd segment of Position, i.e. Organization, was 60 characters, and the validation rule restrict user from saving the record.

Remedial Action: On the input form of Position, the field length limit of the 2nd segment of Position, i.e. Organization, was extended from 60 characters to 200 characters.
